

## The PROFIBUS

(PROCESS FIELD BUS) which is anchored in the international standards IEC 61158 and IEC 61784 is an open, digital communication system with a wide range of applications, particularly in the fields of factory and process automation. It is suitable for both fast, time-critical applications and complex communication tasks.

## The CAN

(Controller Area Network) is a serial communication way, which efficiently supports distributed real-time control with a very high level of security. It provides the error process mechanisms and message priority concepts. These features can improve the network reliability and transmission efficiency. CAN supplies the multi-master capabilities, and is especially suited for networking as well as sensors and actuators within a system or sub-system.
